

20 - 28 June 2009

These are the twenty species of moths that Garden Moths Count is looking for. (The Peppered Moth has two colour forms.) The moth images on the website have notes to help you to recognise them. At www.mothscount.org click on the link to Garden Moths Count and then go to the Moth Gallery.

When you have identified your moths, tell us which ones you found by returning to the website and ticking the moth images in the on-screen form, and then follow the instructions to send in your results.

You may also find other species which are not in the Garden Moths Count survey. If you would like to identify those, the Garden Moths Count website has additional images plus links to further information.

Poplar Hawk-moth (*L Hill*)

Lime Hawk-moth (*P Pugh*)
